

Ime je samo ime, razen če pripada orhideji! Ko gre za [imena orhidej](#), je lahko cela zadeva kar zapletena. Ne gre samo zato, da vemo kako je ime orhideje sestavljeno (rod, vrsta, križanec, sorta), ampak gre zato, da nam ime orhideje, če ga poznamo, veliko pomaga pri ugotavljanju pravilne vzgoje za to rastlino. Iz tega razloga je potrebno še posebej paziti da etiket z imeni orhidej, ki smo jih kupili, ne izgubimo!

Imena so lažja, kadar gre za ime botanične vrste orhideje. Takrat z lahkoto prepoznamo enostavnejše, bolj prepoznavne vrste kot so orhideje iz rodov Cattleya, Cymbidium, Dendrobium, Phalaenopsis in podobne. Pri tem pa postane cela zadeva zapletenejša, kadar gre za botanične vrste z daljšimi ali težje izgovorljivimi imeni kot so Paphiopedilum, Rhynchostylis, Schomburgkia. Tako se za opis imen rodov uporabljajo lahko okrajšave. Tako je za Cattleya – C, Cymbidium – Cym, Dendrobium – Den, in Phalaenopsis – Phal.

Še zapletenejše postane ko se opisujejo križanci in sicer križanci več različnih rodov kot na primer križanec med Brassavola x Laelia x Cattleya – Brassaeliocattleya ali z okrajšavo Blc .

V primerih, ko je ta opis popolnoma nesmisel za takšeno povezano ime, ali pa je enostavno preveč rodov križano in bi bilo celo ime nesmiselno dolgo postane ime popolnoma drugačno. Tako pri križanju orhidej Cochlioda x Miltonia x Odontoglossum – orhideja ni povezava teh imen ampak čisto drugo ime in sicer Vuylstekeara ali z okrajšavo Vuyl .

V nadaljevanju je spisek imen rodov orhidej, križancev orhidej in njihove okrajšave. Pri botaničnih vrstah je navedeno da je naravna, medtem ko je pri križancih navedeno iz katerih rodov so ti bili križani. Ta spisek je dobra pomoč, da lahko ugotovimo kaj pomenijo ta zapletena imena orhidej, iz katerih vrst so križane orhideje in kakšna naj bi bila njihova vzgoja!

Prav neverjetno je, koliko je teh imen. Če samo še upoštevamo dejstvo da je lahko več vrst pod posameznim imenom (Cattleya aurantiaca, Cattleya luteola, Cattleya labiata, Cattleya warneri,

...) potem sploh ni čudno, da je poznano več kot 10.000 vrst orhidej in več kot 70.000 križancev!

Spisek imen po abecedi:
